

What we are doing in
our LAG for the green
transition

18
seasons
in region
2006
2024

... small steps to sustainable Brdy-Vltava region

OUR GOAL AND DREAM 😊

stav k 30. 4. 2021

180 MAS

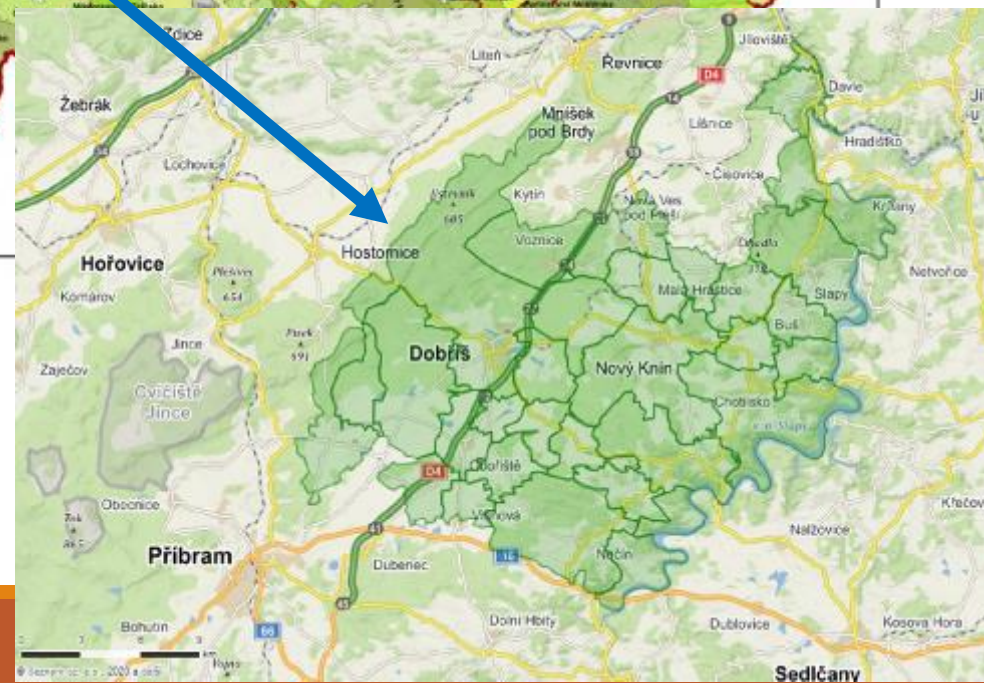

93% pokrytí území ČR

60% obyvatel ČR

Zobrazená data

-  města nad 25 tis. obyvatel
-  vojenský prostor

- Central Bohemia Region – 40 km from the capital of Prague,
- 32 municipalities in our LAG (31.665 inhabitants),
- We are in this region since 2006,
- We have 47 partners at this time,
- Our budget for distribution in the period 2021-2027 is 74.000.000 CZK (2.989.118 EUR)
- **FUNDING TYPE:** Multi-fund – ERDF, EARDF, ESF+

SOCIAL, EDUCATIONAL AND ENVIRONMENTAL ACTIVITIES FINANCED THROUGH MULTIFUND

- **EMPLOYMENT SUPPORT FOR PEOPLE WHO ARE SOCIALLY EXCLUDED OR THREATENED BY SOCIAL EXCLUSION** - Team of workers (long-term unemployed people) who take care about public spaces in our villages – cleaning, cutting grass, pruning, **SUSTAINABLE FORESTRY IN MUNICIPAL FORRESTS** etc. Concept of our team is penetrable = who wants to keep the job, we give him all support (**professional social consulting, professional psychological support, debts consulting, food aid**, etc.). Financed through ESF+.

CLLD AT THE LEVEL OF SCHOOLS

- After our experience with the strategic planning - we were chosen in region to create development strategy of local education. We communicate local needs with schools in this area. We help with grants (administration, advices) to support schools' development.
- And we provide **FOREST PEDAGOGY** to schools in municipality forest. In morning and afternoon programs we teach children and also adults how to maintain sustainable forests (including bee keeping). Financed through ESF+ and local funds.

NATURE TRAIL FOR SUSTAINABLE FORESTS (INVESTMENT)

NATURE TRAIL in the municipality forest which will be **created by children participating in forest pedagogy**. They will monitor activities through all seasons and place messages on the boards for other to see what has been already done. It will be a living nature trail changing according to the season.

We want to bring also families to forest, so there will be a shelter with a fire place to.

The project was supported by our LAG, beneficiary is the municipality of Malá Hraštice. It is now under construction. Financed through EARDF.

LESSON LEARNED

- CLLD is great tool when you can combine investments and non investments. The combination of ERDF, EARDF and ESF+ brings great effects in rural development.
- Local focus is very practical in concrete activities you can do for improving the environment. For example we also support municipalities in tree planting in and around villages.
- Rural – urban linkages are necessary to make efficient plans to manage a climate change, especially when you have a (big) river on your territory (you have to plan in broader context).
- LAG are ready to put a hand in adaptation to the climate change because they know the place and local people. It is necessary to start with children, because they will tell adults...and it is their future.
