DIE STANZ LEBT WIEDER AUF.

What we found

- **Clientel- and staging policy is a huge obstacle.**
 - **Gap between citizens and politicians**
 - **People have lost faith in politics and in themselves**
- **Municipalities losing their ability to solve problems.**
 - **Overregulation**
 - **loss of independence / autonomy**
- **Environmental threats will tie up considerable resources.**

Local Energy Group STANZERTAL

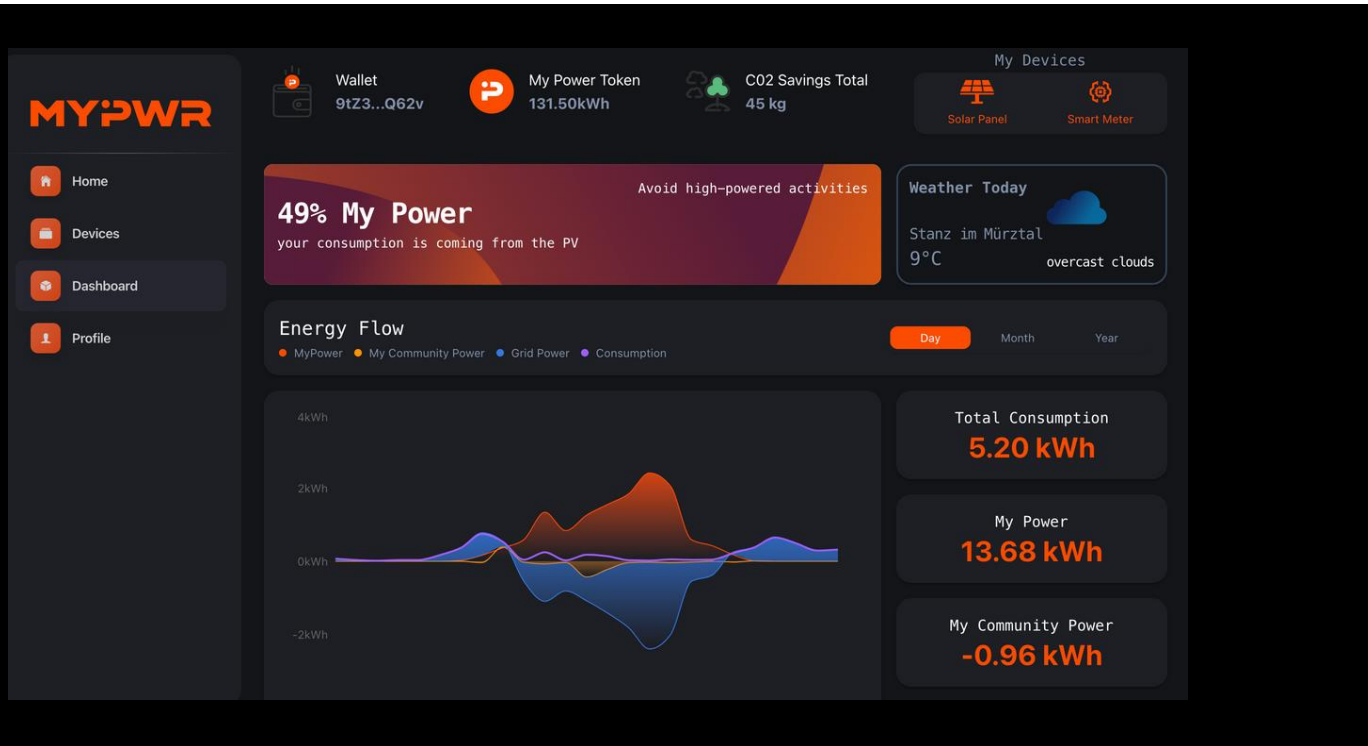

We work on

... a decentralised, participatory driven peer-to-peer-energy-system to cover 50% of our energy requirements (~ 5 GWh) out of our local renewable energy sources in the next 5 years.

Our tools are:

- a Local Renewable Energy Community
- Technology for precise data recording, -analysis, -optimisation and control of all energy loads from production and consumption within the community.
- Blockchain-based digital technology for a local token system and energy trading

What we need

- **better know how transfer from the academic world**
 - **knowledge / empathie in involvement of expertise**
- **simplifying funding applications**
- **more reliable knowledge**
- **more bottom up approach**
- **rooms for reflection**
